

Is solar a viable alternative to electricity in Albania?

A move toward more solar is partly an attempt to diversify Albania's electricity sources. In "Evaluation and integration of photovoltaic (PV) systems in Albanian energy landscape," which was recently published in Solar Compass, the scientists said that solar is an adaptable and affordable alternative, given Albania's sunny climate.

Could solar power reduce Albania's reliance on energy imports?

Albanian researchers say that solar could be key to reducing Albania's reliance on energy imports, but the nation will need to invest in grid infrastructure, streamline laws, and enhance access to funding to support deployment.

How much energy does Albania use?

In Albania, the household sector is fragile and accounts for approximately one-fourth of the country's total final energy consumption (TFEC) and historically occupies 36 %-38.76 % of the total electricity consumption in Albania [23, 24].

Why is electricity so important in Albania?

Regarding the use of electricity that satisfies the demand of the residential sector, Albania reflects a unique case in the region, as electricity is used mainly for heating sanitary water, cooking as well as heating and cooling spaces, which has increased for as much since 90 % of the building stock in Albania is uninsulated.

How will Eem help Albania?

In this regard, the proposed scenarios will help Albania in the process of creating a supportive domestic energy market, ensuring energy supply, a healthier indoor and outdoor environment (GHG emissions reduction), and a lot of benefits in terms of new jobs that would be created if EEM are applied.

Why does Tirana need Vega Solar?

Furthermore, the country is exposed to drought and often turns to emergency imports. Tirana-based Vega Solar, which develops, installs and maintains rooftop solar power plants, saw an opportunity to contribute to diversification with battery energy storage systems.
