Unlike central inverters with high DC voltages in the hundreds of volts, APsystems microinverters tie directly to the low-voltage PV module and connect to the public power grid via standard AC voltages - enhancing worker and homeowner safety, and eliminating the possibility of high-voltage DC "arc" fires.

First, we should know what a Grid-Tie Inverter is. A Grid-Tie Inverter is a device that that can transform DC electricity (ie: Solar Panels, Wind Turbine, Battery Storage) into AC power that can be directly injected into your utility"s electricity network (the power grid). As of today, most inverters available in the market are in the high output (1000W ~ 5000W) category.

The Enphase&#174; M250 Microinverter is a grid-tie inverter that delivers increased energy harvest and reduces design and installation complexity with its all-AC approach. With the M250, the DC circuit is isolated and insulated from ground, so no Ground Electrode Conductor (GEC) is required for the microinverter.
