

How much energy can Peru generate?

According to energy regulator Osinergmin, Peru has the potential to generate up to 70 GW from hydroelectric sources, 77 GW from wind, and about 3 GW from geothermal sources, as well as having very high solar irradiance (especially in the south of the country).

What happened to Peru's electricity system in the 1990s?

At the start of the 1990s, Peru's electricity system was broken. The system suffered recurring power shortages, an investment drought and mismanagement by the vertically integrated state-owned utilities. Together, these issues created a crisis in the power sector which demanded significant structural changes.

Is Peru on the road to energy transition?

Although there have been significant challenges, the country is well on the road to energy transition, with further opportunities ahead, write Miguel Valderrama (left), MBA candidate at the University of Cambridge, and Jose Carlos Palma (right), LatAm Area Manager with EDF International, both Co-Founders of PYEP (Peru Young Energy Professionals).

Does Peru rely on hydropower?

Explains that Peru historically has relied mostly on hydropower, but after the entry into production in 2004 of natural gas from the huge Camisea field, current electricity generation capacity is evenly divided between thermal and hydropower.

How did Peru reform the power sector?

Following models adopted by Chile and the UK at the time, the reform of the Peruvian power generation sector was accomplished in 1992, liberalising the market and establishing new rules to attract investment in transmission and distribution, while unbundling and privatising state-owned assets.
