

Why is solar energy important in South Sudan?

As characterised by ample sunshine with strong solar power potential, South Sudan remains as one of key destinations on African continent for solar energy investment. In addition to this, it has been documented that evolution of solar PV is of great significance in South Sudan.

How long does solar energy last in South Sudan?

Proponents of solar energy argue that a solar system can produce reliable electricity for about 25 years. Having recognised solar energy potential, South Sudan is expected to put more emphasis on development of solar energy sector as part of its fight against energy poverty and economic diversification.

How solar energy can transform South Sudan's economy?

A solar energy can also be transformative to South Sudan's economy. For example, solar energy is affordable, cleaner and last longer as compared to energy from diesel-powered generators because generators need diesel to burn and they also need to be replaced after few years.

How much solar energy does South Sudan have?

South Sudan receives about 8 hours of sunshine daily, providing an estimated solar energy capacity of 436 W/M<sup>2</sup>/year (REEP, 2013). Similarly, wind energy density ranges between 285 and 380 W/M<sup>2</sup> (REEP, 2013). Both the solar sunshine duration and wind density meet the threshold required to produce high quality electricity.

Should subsidies be removed for solar & wind energy in South Sudan?

Subsidies have been crucial in the development of any energy sources, including oil and coal in the early stages of development. So, removing subsidies particularly on fuel for generators would level the investment ground for solar and wind energy in South Sudan.

Does South Sudan have a fight against energy poverty?

The good news is that South Sudan has already started its fight against energy poverty and one evidence for that is the ongoing construction of Nesitu 20MWp PV Solar +35MWh BESS power plant at Nesitu, Juba.
