

What is advanced rail energy storage?

Advanced Rail Energy Storage (ARES) uses proven rail technology to harness the power of gravity, providing a utility-scale storage solution at a cost that beats batteries. ARES' highly efficient electric motors drive mass cars uphill, converting electric power to mechanical potential energy.

How does Ares energy storage work?

ARES energy storage technology employs a fleet of electric traction drive shuttle-trains, operating on a closed low-friction automated steel rail network to transport a field of heavy masses between two storage yards at different elevations.

How long do ARES Systems last?

ARES systems are machines and have a 40-year service life with no degradation and no thermal runaway. ARES uses recycled steel rails, low-carbon and reclaimable mass cars, sophisticated motors and electronics, and freely available gravity, providing a fully sustainable renewable energy storage solution for utility-scale deployment.

How do Ares shuttle trains work?

During periods where excess energy is available on the grid (Reg-Down), ARES shuttle trains draw electricity from the grid which powers their drive motors to move the trains uphill against the force of gravity--efficiently converting electrical energy into gravitational potential energy.

What is a rail energy storage innovation?

One innovation that may work is ARES, which stands for Advanced Rail Energy Storage. This innovation was invented and developed by a company with the same name, ARES LLC. ARES is a large-scale energy storage device that uses a gravitational train system. This innovation consists of several sets of train on the funicular railroad.

How do ARES Systems work?

In an ARES system the rate of energy input and output may be varied by controlling the speed and quantity of masses in motion (increasing or decreasing the intervals between shuttle units), allowing rapid response to grid power requirements over a wide range of output at a constant efficiency.

What is ARES (Advanced Rail Energy Storage) ARES is a large-scale energy storage device that uses a gravitational train system. This innovation consists of several sets of train on the funicular railroad. This system sits on a hill slope so it can utilize gravitational force to discharge the potential energy. Its cars are solid concrete ...

The growing introduction of non-dispatchable intermittent energy sources to the electrical grid can cause some

additional instability to arise. Energy storage systems can be used to close the gap between power generated and load demanded by either supplying power to the grid when other sources do not meet demand or consume power when demand is lower than supply. An ...

Howard Trott is the CEO of ARES North America and an executive with more than 25 years of experience developing and operating a wide range of energy projects, real estate investments and business ventures. ... Mr. Trott is also the CEO of RECON Dynamics, which was created with a vision to provide advanced best-in-class IoT solutions for ...

"The 50-MW facility will be able to provide 15 minutes of regulation services at full capacity, supporting renewable energy integration across the Western U.S. ARES GravityLine uses proven rail technology to ...

Advanced Rail Energy Storage (ARES) is a company that provides a utility-scale energy storage solution. It uses the power of gravity to store energy and delivers it quickly and efficiently to the grid when needed. ARES systems are highly efficient and have a 40-year service life with no degradation or thermal runaway. The company uses recycled ...

Founded in 2010, Advanced Rail Energy Storage (ARES) has developed, tested and patented rail-based, gravity-powered energy storage technologies that are more environmentally responsible, durable, and cost-effective than other utility ...

March 29 (SeeNews) - Advanced Rail Energy Storage LLC (ARES) said Monday it received a right-of-way lease from the US Bureau of Land Management (BLM) for its 50-MW commercial-scale gravity-based rail energy storage project in ...

The Bureau of Land Management approved the Advanced Rail Energy Storage Project (ARES) in this location. It will extend far up onto this bajada. The proposed project is a 50 megawatt gravity based energy storage system that would be constructed on 72 acres (but will disturb over 150 acres for roads and transmission) of BLM managed public land.

Advanced Rail Energy Storage (ARES) has developed a breakthrough gravity-based technology that will permit the global electric grid to move effectively, reliably, and cleanly assimilate renewable ...

In this study, a rail gravity energy storage system model was built based on MATLAB/Simulink, and the energy loss of each component of the system in the energy storage and energy release processes were analyzed. The influence of factors such as the mass of the vehicle, the speed of the vehicle, the inclination of the slope, the height of the ...

The Advanced Rail Energy Storage is a 19th century solution for a 21st century problem. ... The ARES is pretty simple, as cutting-edge energy storage technology goes. A lot of rocks. A few ...

Advanced Rail Energy Storage (ARES) ...

Advanced Rail Energy Storage (ARES) has developed a system that uses heavy rail cars that are pushed to the top of a grade using excess power, releasing them back down the hill to generate ...

Advanced Rail Energy Storage (ARES) has developed a breakthrough gravity-based technology that will permit the global electric grid to move effectively, reliably, and cleanly assimilate renewable energy and provide significant stability to the grid. ARES stores energy by raising the elevation of mass against the force of gravity, and recovers ...

ARES Nevada LLC filed an application with the Nevada Public Utilities Commission announcing its intention to seek a permit under the Utility Environmental Protection Act to construct an Advanced Rail Energy Storage Regulation Energy Management Project on 156 acres managed by the U.S. Bureau of Land Management in the Carpenter Canyon area.

The GravityLine™ storage system is made up of multiple 5MW tracks and can vary in size from 5 MW to 1 GW of power and an equivalent range of energy (MWh to GWh) depending upon weight and number of mass cars, slope and distance. ARES' GravityLine™ design boasts duration flexibility of between 15 mins and 24+ hours.
