

Could co-generation be possible in the eastern highlands of Zimbabwe?

The Department of Energy through its National Biomass Strategy identified three potential projects for co-generation in the Eastern Highlands of Zimbabwe. The Nyanga Sawmill Wood Residue Project; which is situated at a Wattle Company site has been estimated to have generation capacity of about 3.5 MW.

Who is Zimbabwe Power Company (ZPC)?

Zimbabwe Power Company (ZPC) was incorporated in 1996 as an investment vehicle in the generation of electricity and became operational in 1999. The organisation has been authorised to construct, own, operate and maintain power generation stations for the supply of electricity.

Which is the largest coal-fired power station in Zimbabwe?

Situated in the North Western part of Zimbabwe, Hwange Power Station is the largest coal-fired power station with 920MW installed capacity which comprises of 4x120MW and 2x220 MW units. It is the 14th largest thermal station in the Southern African region and is adjacent to Wankie Colliery Open Cast Mine. The station was built in two stages.

Is co-firing a viable energy production technology in Zimbabwe?

Co-firing of coal and biomass in electricity generation is a technology that has been demonstrated, tested and proved in all boiler types commonly used by electricity utilities. There is no commercial application of co-firing as an energy production technology in Zimbabwe.

Will ZPC expand Hwange power station?

In August 2018, ZPC officially commenced expansion works at Hwange Power Station which will result in a third stage being added to the station with 2 x 300MW units being constructed. The expansion project will increase Hwange's generation capacity from the current 920MW to 1520MW.

What is cogeneration & how does it work?

Cogeneration is the sequential generation of thermal energy (steam) and electrical power. This is mainly via electricity generation plants using steam turbine systems. Cogeneration is practiced at the two sugar estates based on the bagasse produced from sugarcane crushing.

Bagasse Energy Cogeneration in Zimbabwe: The Technology, Possible Improvements and Setting the Right Environment. Charles Mbohwa | FZweIE ... Zimbabwe has experienced a stagnating electrical power capacity of 2 Gigawatts (GW) against a growing demand for electricity [8]. In reality, the effective capacity has tended to

A biogas plant consists mainly of two parts: the anaerobic digestion part, where the actual production of biogas takes place (consisting of one or more digestors) and the transformation of biogas into energy part, i.e.

the cogeneration plant.. Biogas can be produced starting from different raw materials, such as livestock effluents, sludge from wastewater treatment plants, ...

ZPC currently operates four coal-fired power stations, Hwange, Bulawayo, Munyati, and Harare thermal stations, and one hydropower station, Kariba South Power Station. All five have a total of 1960 MW as installed capacity. Each power station holds a generation license from the Zimbabwe Electricity Regulatory Authority (ZERA). The company's mandate is to generate electricity for ...

Zimbabwe Consolidated Diamond Company (Pvt) Ltd | 27,164 followers on LinkedIn.
